

# My Travels in the US and Canada

Years ago, I built my first simulation model of population dynamics the United States. I resolved to see the population centers I knew so well though data. I drafted my first list of places to visit before I could say that I had truly and thoroughly traveled the country. Since then, I have traveled over [MISSING] miles and my list has grown to include 128 metropolitan areas in all 50 states, plus DC, Puerto Rico, and adjacent areas of Canada.

This information dashboard tracks my past progress towards achieving that goal, and provides planning information for my future efforts.

## Progress Toward Goal

States

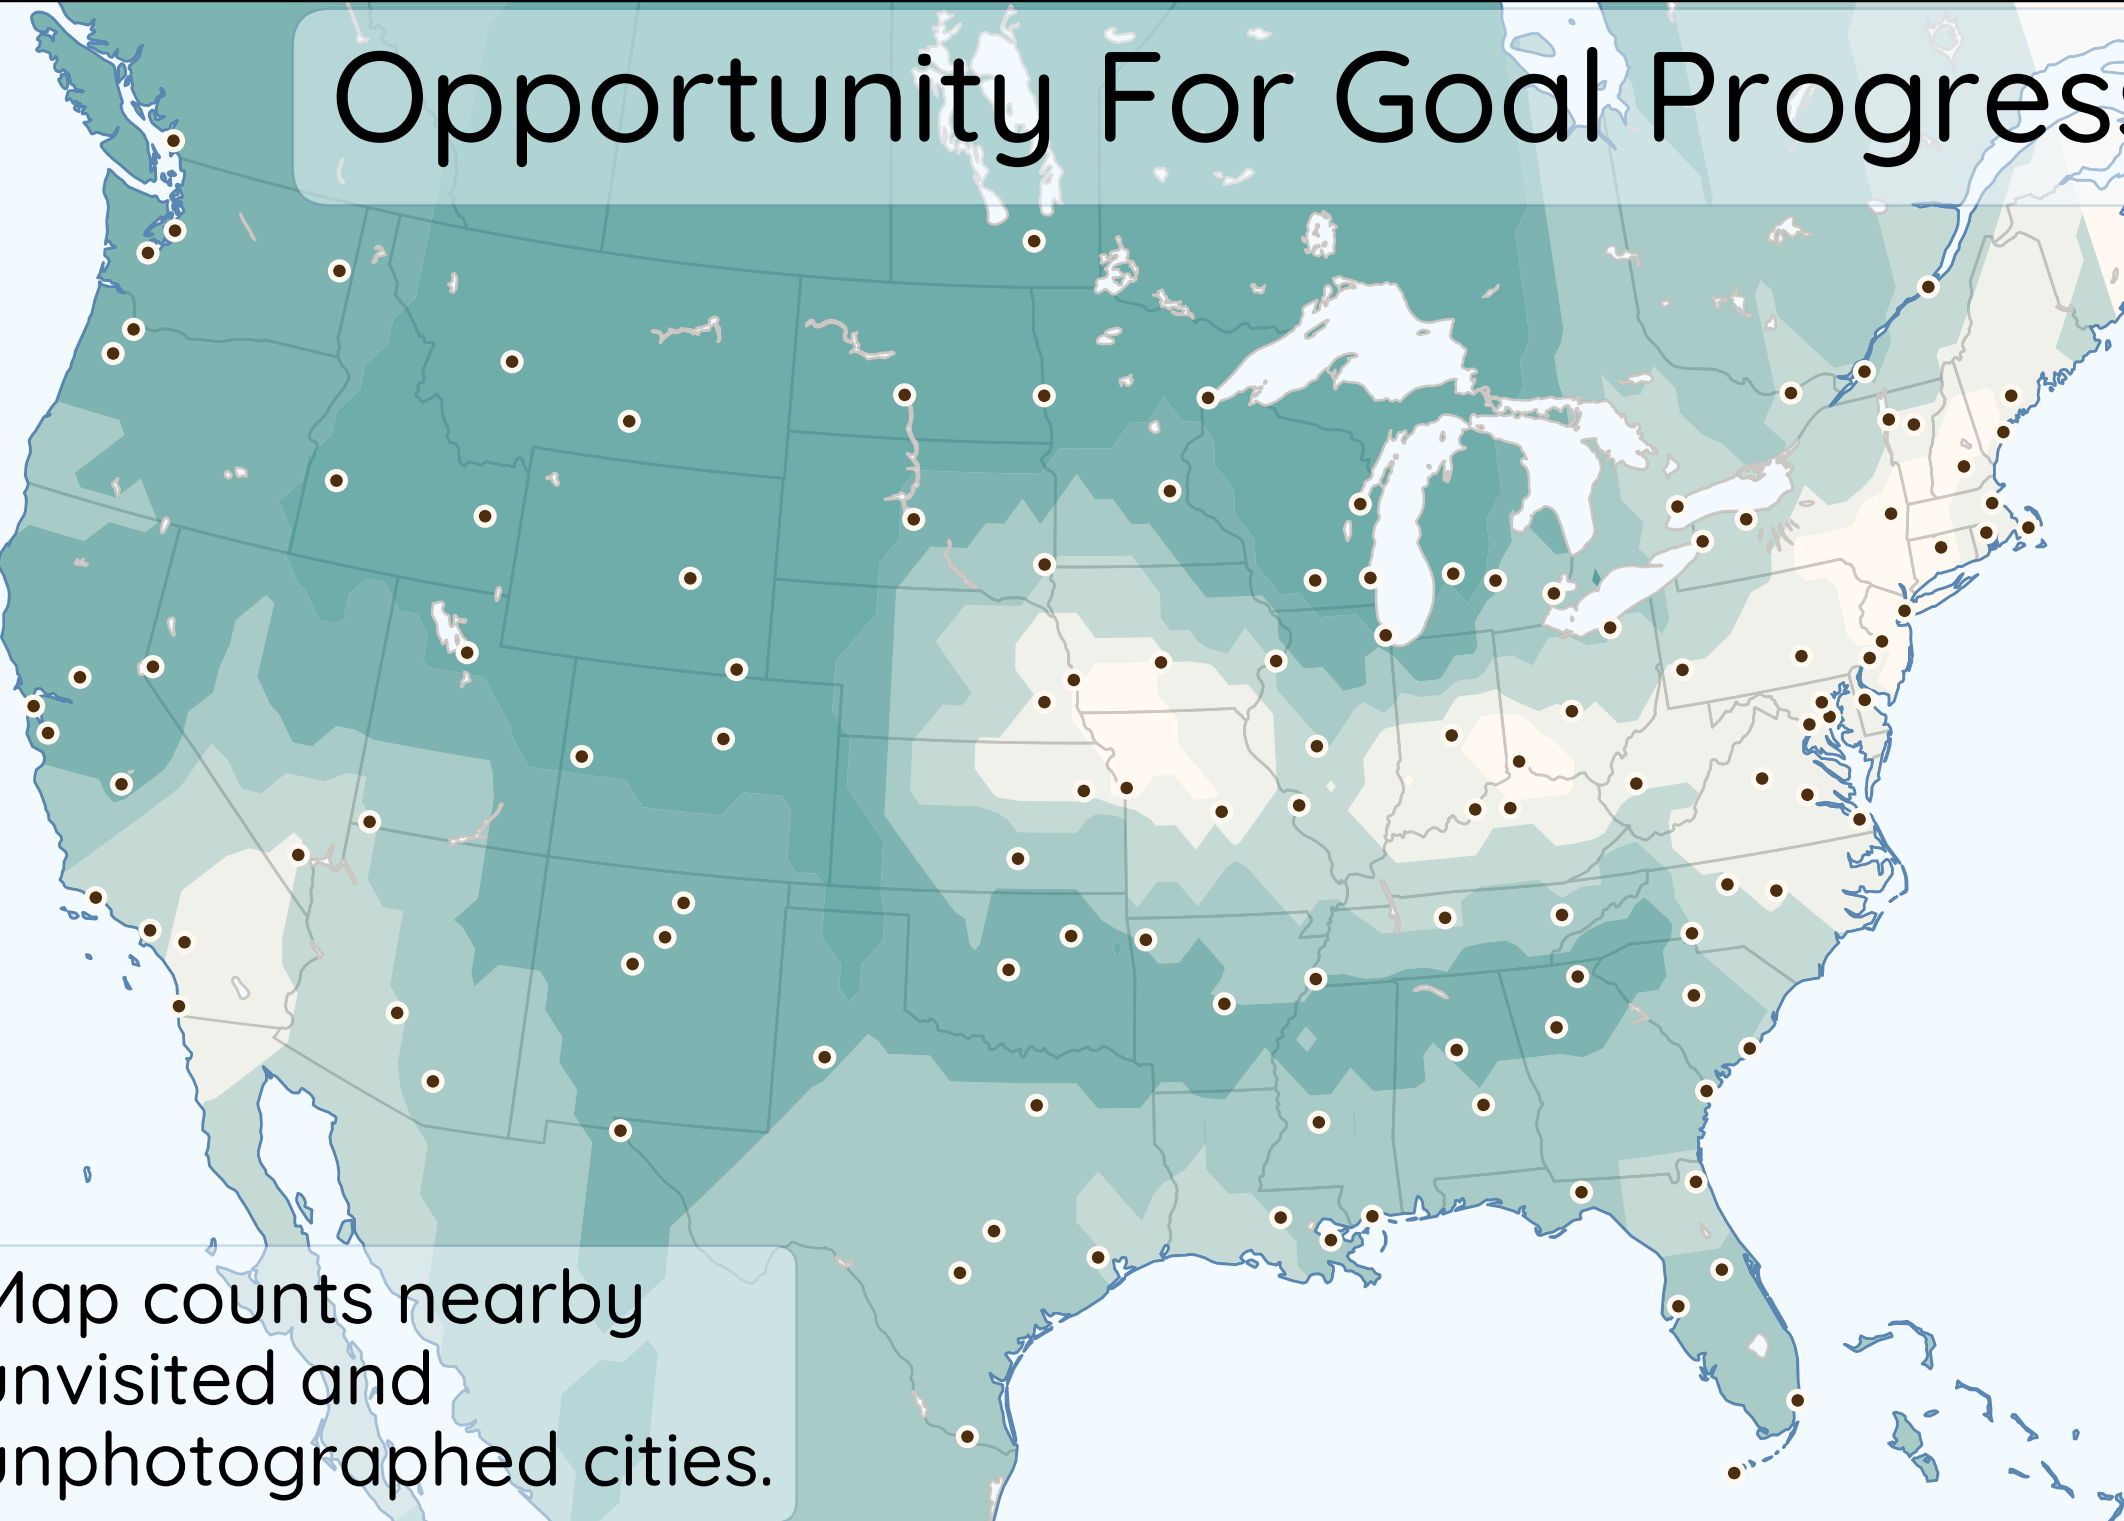

Metropolitan Areas

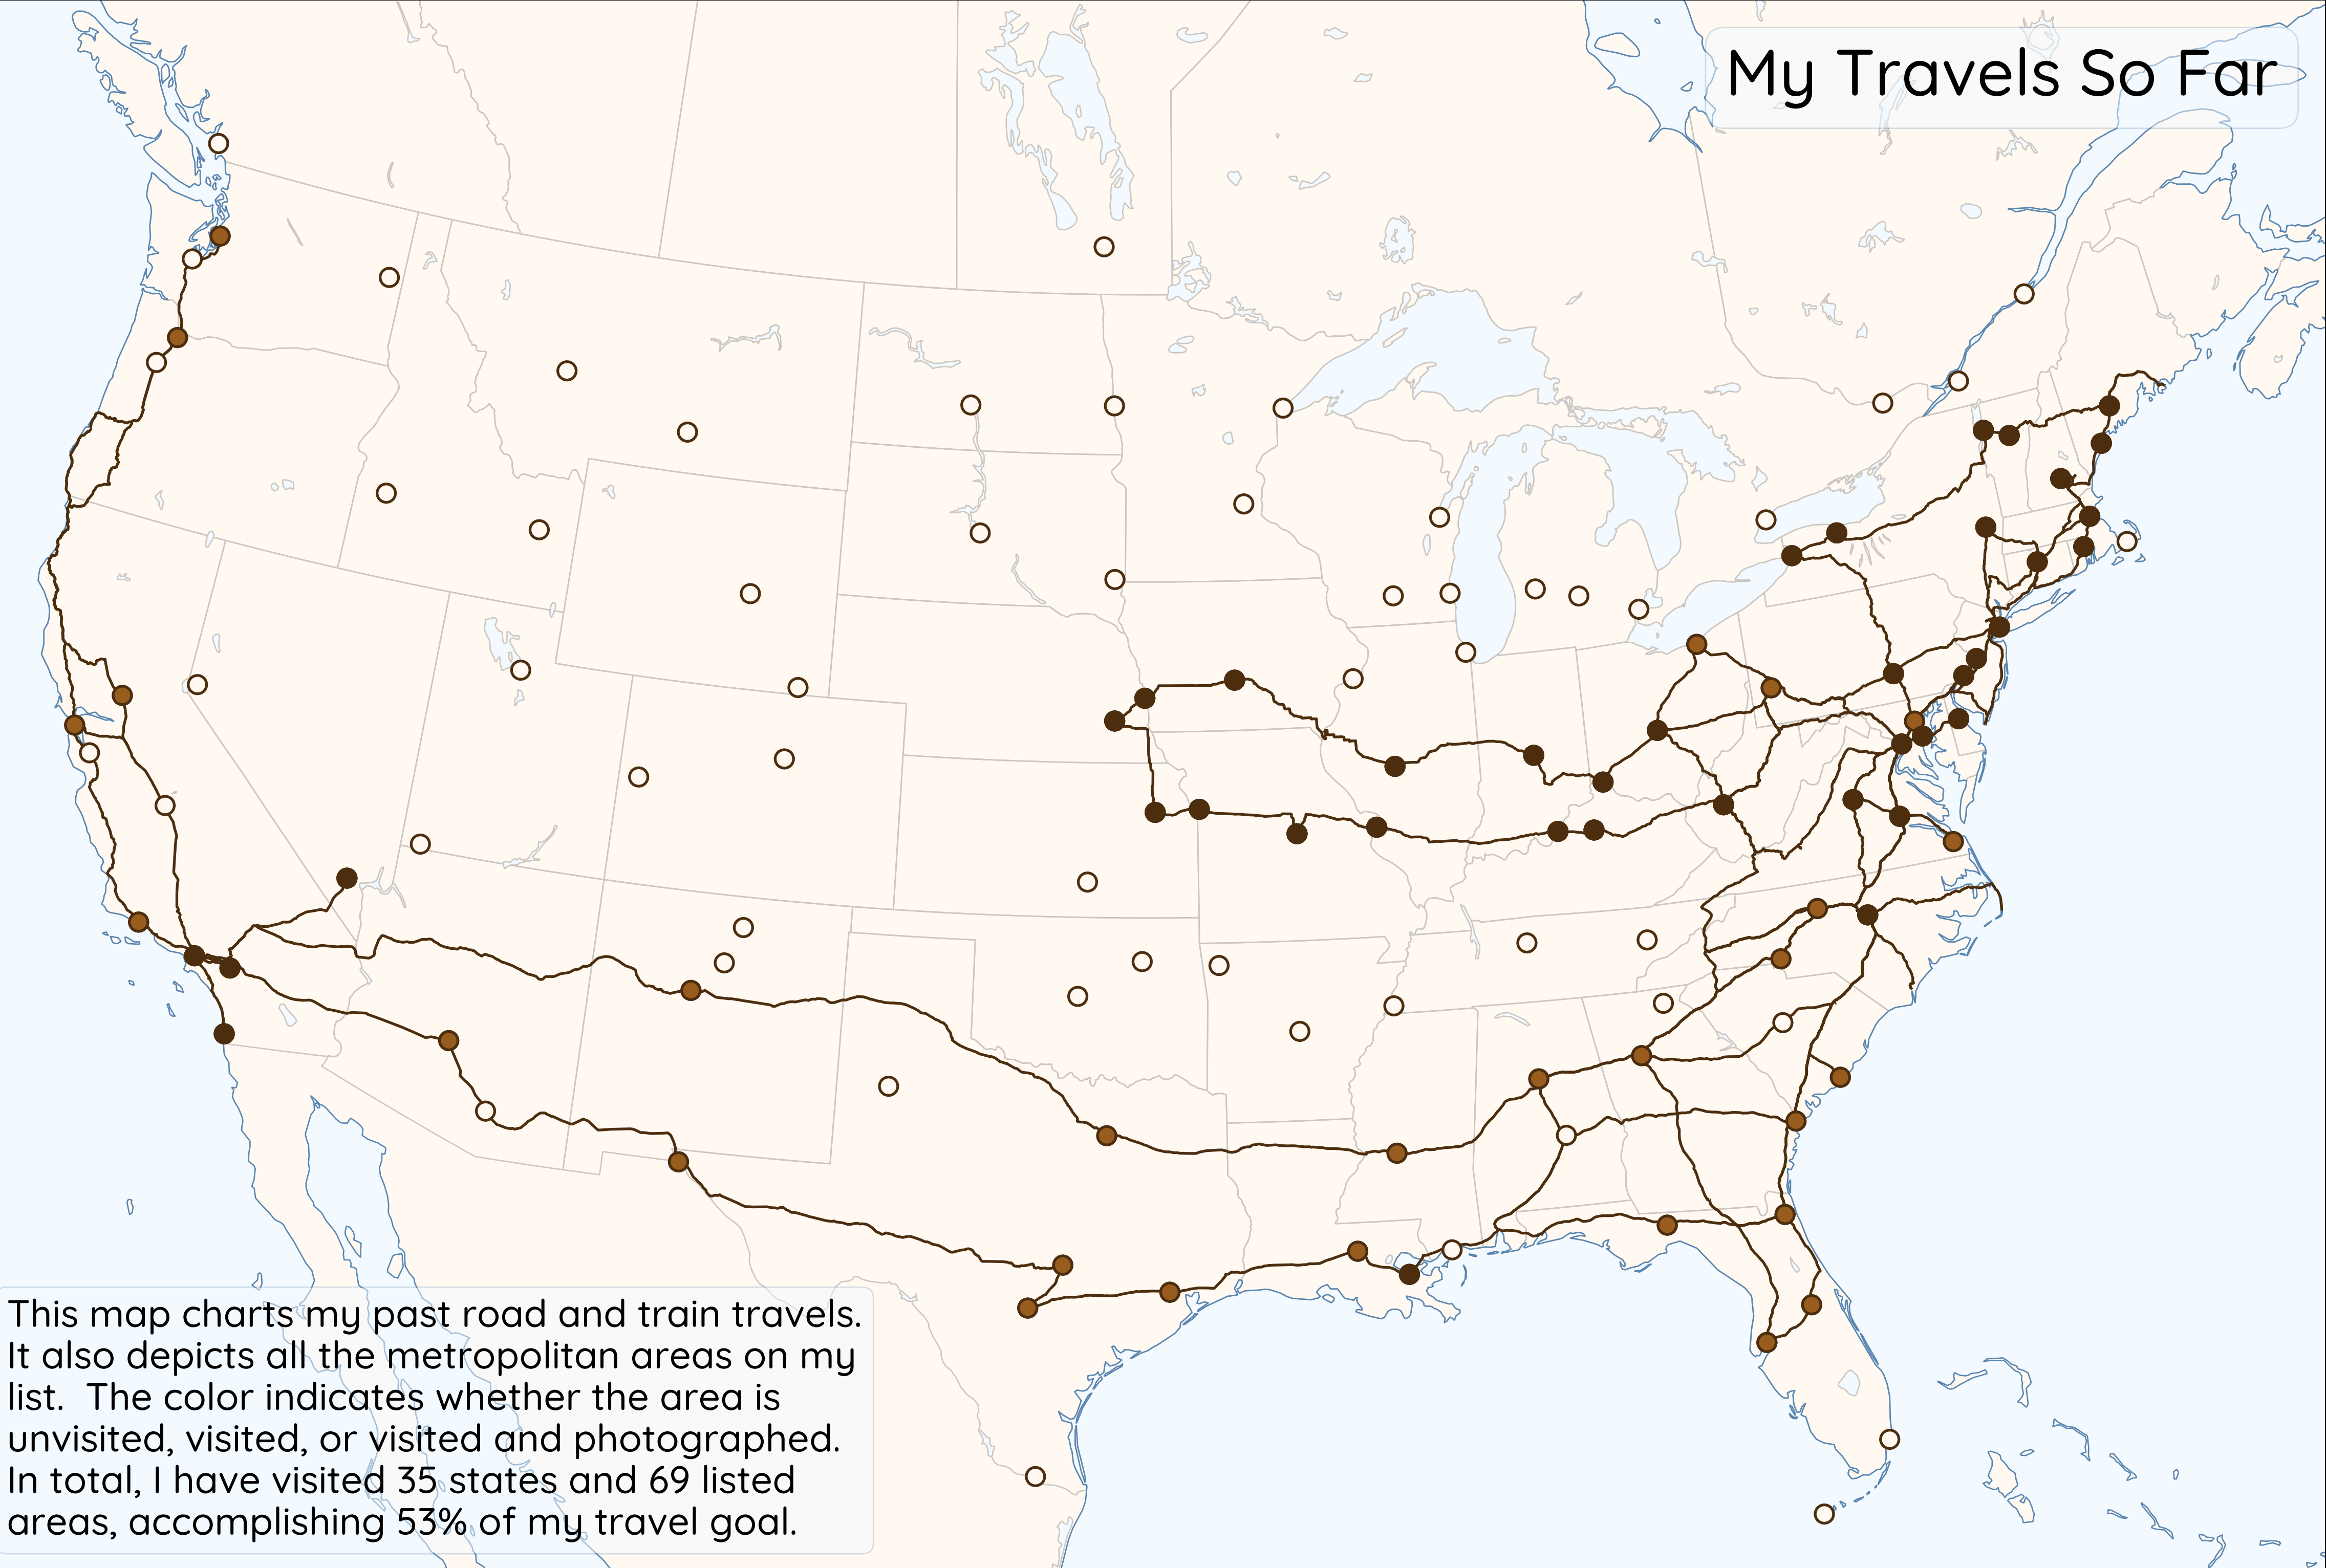

These bar charts measure progress towards visiting (and taking pictures) each metropolitan area and state on my list. I consider an area “visited” if I have walked in it for at least an hour.
